

From the forests where our logs come from, to the interiors where our floors live, Rhone Hardwood is committed to offering the most Eco-friendly wood products available. Our lumber, adhesives, and finishes are at the forefront of sustainability and air quality. As a member of the US Green Council we work hard to offer products manufactured with the environment in mind.

Lumber

All the lumber used to make Rhone Flooring comes from certified sustainable forests. While most of the oak sold today as "European Oak" is harvested in Russia or China and then manufactured in China, our oak is 100% real French Oak only harvested in Europe and none of our flooring is manufactured in China.

LEED Certification

All our floors will help LEED projects earn credits for indoor air quality and certified wood materials. IDEQc4.4- Low Emitting Materials-made with no added urea-formaldehyde.

PEFC Certification

All Rhone products are manufactured in a PEFC (Program for Endorsement of Forest Certification) certified mill. The PEFC is an international non-profit, non-governmental organization dedicated to promoting sustainable forest management. The PEFC works throughout the entire forest supply chain to promote good practice in the forest and ensure that timber forest products are produced with respect for the highest ecological, social, and ethical standards.

To learn more visit www.pefc.org.

Adhesives

Today there are many discussions about adhesives and indoor air quality. All Rhone products meet the most stringent requirements for indoor air quality and are Floorscore certified which covers all other prior testing such as NAUF (No Added Urea Formaldehyde) and Carb II.

Finish Systems

Rhone offers both UV Cure Matte Urethane and UV Cured Oil.

UV Cured Urethane

These products are very common in the flooring industry. They are low maintenance and can be easily cleaned using most solvent free cleaners. UV-Cured Urethanes are petroleum based products but because they are completely UV cured and they are 100% solid they do not gas off and negatively affect indoor air quality. Our ultra-matte finish offers a very natural look unlike other thick high gloss urethane finishes that offer a plastic like look.

UV Cured Oil

Our UV Cured Oil is manufactured by WOCA Denmark. These products are made with natural ingredients not petroleum based which make them a preferred choice for eco-conscious consumers. Our oil is Zero VOC and will not gas off or negatively affect indoor air quality. The products are maintained with a special line of cleaning products that are also VOC free and natural.
